SUMMARY

Analyst with a year in quality and process operations, and an earlier year running brand and demand generation for a B2B products business. Happiest at the messy end of a problem: pull the numbers in SQL and Excel, work out what is actually breaking, then stay with it through execution instead of handing over a deck.

SKILLS

Analytics	SQL, advanced Excel and Google Sheets (pivots, lookups, dashboards), Python, Tableau
Business	Category and process improvement, demand generation, market research, stakeholder management
Building	React.js, Next.js, Node.js, MongoDB, and GenAI tooling (LangChain, prompt design, LLM evaluation)

WORK EXPERIENCE

Quality Analyst (LLM Post Training) at Ethara.ai Aug 2025 – Aug 2026

- Own quality checks on a daily queue of written responses, judged against a rubric two reviewers must agree on.
- Track which mistakes keep recurring and turn them into written guidance, so the same fix is not made twice.
- Keep scoring aligned across a distributed reviewer pool by flagging where the rubric reads two ways.
- Work to tight daily deadlines while the standard shifts week to week, so re-reading it is half the job.

Social Media Marketing and Design at Maica Plastiwood Apr 2023 – Apr 2024

- Ran demand generation end to end for a B2B building-materials business: calendar, creative, community.
- Built relationships with creators and prospective investors as the first contact for external partners.
- Turned technical product specifications into copy a buyer could actually act on.
- Shipped posts and reels on a weekly cadence, agreeing with product and sales on what to push and when.

PROJECTS

AI FinTrack (Budget and Spend Tracker) [Live Demo](#)

- Categorises transactions across accounts, tracks them against monthly budgets, and flags where spend drifts.
- Scans receipts automatically, cutting the manual entry that usually kills this kind of tracking.
- Emails automated summaries so the numbers reach the user without opening the dashboard. Next.js, PostgreSQL.

Support Ticket Classifier [GitHub](#)

- Sorts incoming support requests into six categories, assigns a priority, and recommends the next action.
- Built live in roughly 20 minutes as an interview assignment, with a fallback for when the AI service is down.

EventsHub (Two-Sided Campus Marketplace) [Live Demo](#)

- Departments list events on one side, students discover and register on the other, with department filters.
- An admin moderation queue gates what goes live, so a single listing standard holds across every department.
- Role-aware dashboards give students, event heads and admins only the actions that belong to them.

EDUCATION

2022 – 26 Bachelor's Degree at **Acropolis Institute of Technology and Research**, Indore

2021 – 22 Class 12th, CBSE (81%) • **2019 – 20** Class 10th, CBSE (93%)

CERTIFICATES

Deloitte, Data Visualisation • **Microsoft SAP**, MERN Stack (60-day workshop) • **Udemy**, React.js Crash Course

ACHIEVEMENTS

- Winner, Google AI Hackathon (AIPL): scoped, built and pitched a working solution against a fixed deadline.
- Lead Member of the Debate Club at the Entrepreneurship Development Cell since 2022.
- Ran freelance content and social media for several creators alongside full-time work.

INTERESTS

Consumer behaviour and market strategy, public speaking, human psychology, and philosophical literature.
